

Automatic light guidance and falls management

DementiaSafe (DS) is the most cost effective solution to bed occupancy detection and "in room" light guidance.

DementiaSafe (DS)...lighting the way for your residents while lightening the load for your staff...

DementiaSafe (DS)...working with your staff to increase efficiency.

Whenever a Resident leaves their bed, an automatic courtesy light on the unit is activated. If a Resident does not return to their bed in a pre-selected time frame (5 settings) an alarm is transmitted to the Nursecall system.

DementiaSafe (DS) is simple to install and simple to use and provides automatic light guidance to prompt individuals, particularly those suffering from dementia, who may find it difficult to remember why they got out of bed. Leading to increased privacy and dignity for your residents, and increased efficiency and peace of mind for your staff.

Programmed to interpret situations the **DS** can also be adjusted for individual Residents needs and can alert staff to any falls or periods of confusion.

- Installed in 15 minutes, to minimise disruption.
- Suitable for any Resident or bed type.
- Completely portable and re-locatable.
- Suits existing and new-build schemes.
- Wireless addition for bedroom door and ensuite light.
- NO hard wiring, and offers easy external integration with most Nursecall and Telecare systems.
